

# End-to-End Quality Management without System Silos

Modular eQMS powered by WEBCON – seamlessly integrated with Microsoft Dynamics 365 Business Central

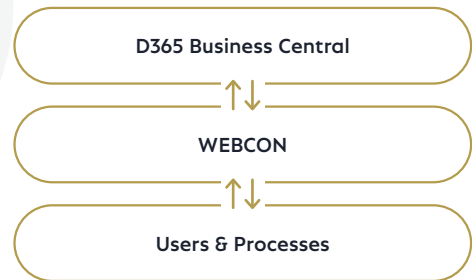

## Too many tools. Too little control.

When systems don't communicate, quality management becomes fragmented, inefficient, and difficult to control. Siloed applications create process gaps, limit transparency, and increase compliance risks. At the same time, regulatory frameworks such as ISO, IFS, and IATF require fully traceable, audit-ready, and tamper-proof documentation. Manual documentation and media disruptions introduce inconsistencies, errors, and audit exposure.

At the same time, valuable ERP data often remains untapped—despite its potential to significantly improve quality performance, decision-making, and operational efficiency. Information is fragmented across documents, inboxes, and individuals, limiting its impact on day-to-day operations. Especially in regulated industries, the lack of standardized, system-driven workflows leads to inefficiencies and increased operational risk.

## One platform for end-to-end quality processes

- Low-code platform accelerates the digitalization and orchestration of quality processes
- Centralized governance of roles, version control, and approval workflows
- Certified Business Central connector enabling seamless, bidirectional data integration
- Instant process changes without complex release management cycles
- Scalable across plants, sites, and global operations

## Applications and process templates

<b>Audit Management</b>	<b>Incident &amp; Action Management</b>	<b>CAPA / 8D Management</b>	<b>Digital Quality Manual</b>
<b>Process Control</b>	<b>Supplier Quality Management</b>	<b>Complaint Management</b>	<b>Risk &amp; Contract Management</b>
<b>Change Control</b>	↳ All applications and process templates are modular, fully combinable, and extensible at any time.		

## Your benefits

- One unified platform replacing fragmented system landscapes
- Faster time-to-value with minimal implementation effort
- Built-in audit readiness and compliance assurance
- Real-time integration of Business Central master and transactional data into quality processes
- Flexible combination of standard applications and custom workflows
- AI-driven insights for faster, better decision-making

## Proven across multiple industries

### Röchling Medical

Centralized quality and knowledge management successfully implemented

### Ionisos

Paperless quality assurance deployed across multiple sites

### Global Hydro

Audit processes fully digitised across countries

### Innovate

Reduced manual workload by approximately 40 hours per month

## Fits into your system landscape

### Integration

- Standardized Business Central connector
- Reuse of existing master and transactional data
- Seamless, bidirectional data synchronization

### Deployment options

- Public Cloud
- Private Cloud
- On-Premises
